2014: Good Year For A Great War?

<http://nationalinterest.org/commentary/2014-good-year-great-war-9652>

Precisely a hundred years ago today, the richest man in the world sent New Year's greetings to a thousand of the most influential leaders in the U.S. and Europe announcing: mission accomplished.

UI-Router: Apps with Depth by Tim Kindberg

<http://slid.es/timkindberg/ui-router>

UI-Router is an angularjs replacement module for ngRoute. It builds upon ngRoute's features by adding nested views and states capabilities as well as the ability to have multiple named views at any level in the state tree.

Show route only after all promises are resolved

<http://blog.brunoscopelliti.com/show-route-only-after-all-promises-are-resolved>

> When a new route is requested in an AngularJS application, it is often necessary to retrieve data from the server to fill the template. If the server request takes too long to complete, it is therefore possible that an incomplete view is presented to the user. > To avoid this problem it is possible to delay the appearance of the new view until all the pending XHR requests have completed.

angularjs, tips, routing, promises

Lawnchair

<http://brian.io/lawnchair/>

> a lawnchair is sorta like a couch except smaller and outside. perfect for html5 mobile apps that need a lightweight, adaptive, simple and elegant persistence solution. > collections. a lawnchair instance is really just an array of objects. > adaptive persistence. the underlying store is abstracted behind a consistent interface. > pluggable collection behavior. sometimes we need collection helpers but not always.

Measure Anything, Measure Everything

<http://codeascraft.com/2011/02/15/measure-anything-measure-everything/>

If Engineering at Etsy has a religion, it's the Church of Graphs. If it moves, we track it. Sometimes we'll draw a graph of something that isn't moving yet, just in case it decides to make a run for it. In general, we tend to measure at three levels: network, machine, and application. Application metrics are usually the hardest, yet most important, of the three. They're very specific to your business, and they change as your applications change (and Etsy changes a lot). Instead of trying to plan out everything we wanted to measure and putting it in a classical configuration management system, we decided to make it ridiculously simple for any engineer to get anything they can count or time into a graph with almost no effort. (And, because we can push code anytime, anywhere, it's easy to deploy the code too, so we can go from "how often does X happen?" to a graph of X happening in about half an hour, if we want to.)

I'm Not Going To Coachella This Year

<http://www.theawl.com/2014/01/im-not-going-to-coachella-this-year>

> I'm not going to Coachella this year. Since 1999, the music festival has been raging each year in the dusty Empire Polo Club of Indio, California. Each year I mildly look forward to the announcement of the line-up. What bands that I don't really care about will be named the "headliners"? What bands that I mildly like will be in much smaller type, in a strange order, that makes no sense based on either record sales or fan base or any other metric. Ooh, I'll think, finally, a festival where I can see both Mogwai and Girl Talk and Laura Mvula and maybe a flashback performance of the Jon Spencer Blues Explosion! Sure, I'd totally love to see a set by The Magician. And Laurent Garnier! God I used to love Laurent Garnier. Also upon Googling, some of these other bands sound kind of okay. > > But once again, this year, like every year that has come before, I'm definitely not going to Coachella. Seems really far. Seems kinda sweaty and tiring. Probably loud. Also I have access to all this music in my house. Once again, for the 14th consecutive Coachella, I'm totally not attending.

Some Thoughts on the Economics of Software Development

<http://dominictarr.com/post/71958587606/some-thoughts-on-the-economics-of-software-development>

The problem with software development, is that the ways used to fund it are either more suited to physical products, or are otherwise out of line with the interests of the users of the software. Here are my thoughts on the ways this fails, and also an idea for another approach.

Listen to the Longest Recorded Echo

<http://adhoc.fm/post/longest-echo/>

> Ichindown, Scotland could be the new Hitsville UK. Its oil storage complex at least has Hitsville USA's echo chamber beat, possessing the longest echo in the world, according to acoustic engineer, Trevor Cox. Cox finagled his way into the old Scottish oil tank to record the sound of a pistol firing and the subsequent echo, which lasts for over a minute. Let's get Smokey Robinson out there ASAP.

Is this life real?

<http://aeon.co/magazine/nature-and-cosmos/can-we-tell-if-reality-is-a-computer-simulation/>

Our species is not going to last forever. One way or another, humanity will vanish from the Universe, but before it does, it might summon together sufficient computing power to emulate human experience, in all of its rich detail. Some philosophers and physicists have begun to wonder if we're already there. Maybe we are in [...] The post Is this life real? appeared first on Aeon Magazine .

Saudade

<http://en.wikipedia.org/wiki/Saudade>

Saudade (European Portuguese: [sɐw'ðaði], Brazilian Portuguese: [saw'dadi] or [saw'dadʒi], Galician: [saw'ðaðe]; plural saudades) is a Portuguese and Galician word that has no direct translation in English. It describes a deep emotional state of nostalgic or deeply melancholic longing for an absent something or someone that one loves. Moreover, it often carries a repressed knowledge that the object of longing will never return. A stronger form of saudade may be felt towards people and things whose whereabouts are unknown, such as a lost lover, or a family member who has gone missing.

The Truths Behind 'Dr. Strangelove'

<http://www.newyorker.com/online/blogs/newsdesk/2014/01/strangelove-for-real.html>

End the Phone Data Sweeps

<http://www.nytimes.com/2014/01/24/opinion/end-the-phone-data-sweeps.html>

Industry Awakens to Threat of Climate Change

http://www.nytimes.com/2014/01/24/science/earth/threat-to-bottom-line-spurs-action-on-climate.html?hp&_r=0

Coke reflects a growing view among American business leaders and mainstream economists who see global warming as a force that contributes to lower gross domestic products, higher food and commodity costs, broken supply chains and increased financial risk. Their position is at striking odds with the longstanding argument, advanced by the coal industry and others, that policies to curb carbon emissions are more economically harmful than the impact of climate change. ... Nike, which has more than 700 factories in 49 countries, many in Southeast Asia, is also speaking out because of extreme weather that is disrupting its supply chain. In 2008, floods temporarily shut down four Nike factories in Thailand, and the company remains concerned about rising droughts in regions that produce cotton, which the company uses in its athletic clothes.

### Peter Freuchen

<http://kottke.org/14/01/peter-freuchen>

> That's Peter Freuchen and his wife Dagmar Freuchen-Gale, in a photo taken by Irving Penn. Freuchen is a top candidate for the Most Interesting Man in the World. Standing six feet seven inches, Freuchen was an arctic explorer, journalist, author, and anthropologist. He participated in several arctic journeys (including a 1000-mile dogsled trip across Greenland), starred in an Oscar-winning film, wrote more than a dozen books (novels and nonfiction, including his Famous Book of the Eskimos), had a peg leg (he lost his leg to frostbite in 1926; he amputated his gangrenous toes himself), was involved in the Danish resistance against Germany, was imprisoned and sentenced to death by the Nazis before escaping to Sweden, studied to be a doctor at university, his first wife was Inuit and his second was a Danish margarine heiress, became friends with Jean Harlow and Mae West, once escaped from a blizzard shelter by cutting his way out of it with a knife fashioned from his own feces, and, last but certainly not least, won \$64,000 on The \$64,000 Question.

### Pneuma

<http://en.wikipedia.org/wiki/Pneuma>

Pneuma (πνεῦμα) is an ancient Greek word for "breath," and in a religious context for "spirit" or "soul." It has various technical meanings for medical writers and philosophers of classical antiquity, particularly in regard to physiology, and is also used in Greek translations of the Hebrew Bible and in the Greek New Testament. In classical philosophy, it is distinguishable from psyche (ψυχή), which originally meant "breath of life", but is regularly translated as "spirit" or most often "soul".

### **Optimizing Web Font Rendering Performance**

<http://www.igvita.com/2014/01/31/optimizing-web-font-rendering-performance/>

A hands-on look at how to measure web font latencies and optimize their use: transfer latencies, time of initial fetch, and interaction with the critical rendering path. 1. Audit your font usage and keep it lean. 2. Make sure font resources are optimized - see Google Web Fonts tricks. 3. Instrument your font resources with Resource Timing: measure → optimize. 4. Optimize the transfer latency and time of initial fetch for each font. 5. Optimize your critical rendering path, eliminate unnecessary JS, etc. 6. Spend some time playing with the Font Load Events API.

## Planetary Unfolding

[http://en.wikipedia.org/wiki/Planetary\\_Unfolding](http://en.wikipedia.org/wiki/Planetary_Unfolding)

> Michael Stearns became a resident composer musician at Emily Conrad's meditation classes in 1975. He composed and performed at first on a Minimoog and various electro-acoustic instruments. In 1979, he was introduced to the Serge modular synthesizer by Kevin Braheny, who owned a 15-panels system (dubbed "The Mighty Serge"), which he used on Morning Jewel. He then built his own 12-panels Serge. On this one, as he already did with Braheny's system, he performed electronic music with a strong feeling of space. >  
Planetary Unfolding was recorded around 1981, when Michael left Conrad's Continuum Studio. Musical ideas that Michael performed on the Serge the previous years were put together and developed and gave birth to this 52 minute piece of music, with two parts each cut in three tracks. > The album was given a first release under Michael Stearns' own label, Continuum Montage, in 1981. It was reissued on CD from 1985 to 1991 by Sonic Atmospheres and is since unavailable: as of June 2009, it hasn't been reissued on Stearns's 2000-launched label Earth Turtle.

### Banging Your Head Against an AngularJS Issue? Try This

<http://nathanleclaire.com/blog/2014/01/31/banging-your-head-against-an-angularjs-issue-try-this/>

As I've gotten a little into AngularJS I've been surprised by how often my assumptions about how things will work have turned out to be wrong. When you start to form a basic mental model of how Angular works and you hit your first stumbling block where your model turns out to be incorrect it can be really, really, frustrating. In particular I had one issue that kept cropping up so often I began trying it before running to Google for help if something wasn't working the way I would have expected (all my views should just magically sync up with what's on \$scope, right?). This solution is to make sure \$scope.\$apply is getting used in the proper manner when updates to \$scope are happening, especially if they are happening in unusual places e.g. inside of directives. Since I don't really like "magical" or knee-jerk fixes to problems I highly recommend Jim Hoskins's article on \$scope.\$apply which you can find here.

A YEAR ON THE INTERNET: 2014

F E B R U A R Y 16 , 2 0 1 4

## This is a Tor Exit Router

<http://93.184.66.227/>

Most likely you are accessing this website because you had some issue with the traffic coming from this IP. This router is part of the Tor Anonymity Network, which is dedicated to providing privacy to people who need it most: average computer users. This router IP should be generating no other traffic, unless it has been compromised. Tor sees use by many important segments of the population, including whistle blowers, journalists, Chinese dissidents skirting the Great Firewall and oppressive censorship, abuse victims, stalker targets, the US military, and law enforcement, just to name a few. While Tor is not designed for malicious computer users, it is true that they can use the network for malicious ends. In reality however, the actual amount of abuse is quite low. This is largely because criminals and hackers have significantly better access to privacy and anonymity than do the regular users whom they prey upon. Criminals can and do build, sell, and trade far larger and more powerful networks than Tor on a daily basis. Thus, in the mind of this operator, the social need for easily accessible censorship-resistant private, anonymous communication trumps the risk of unskilled bad actors, who are almost always more easily uncovered by traditional police work than by extensive monitoring and surveillance anyway. In terms of applicable law, the best way to understand Tor is to consider it a network of routers operating as common carriers, much like the Internet backbone. However, unlike the Internet backbone routers, Tor routers explicitly do not contain identifiable routing information about the source of a packet, and no single Tor node can determine both the origin and destination of a given transmission. As such, there is little the operator of this router can do to help you track the connection further. This router maintains no logs of any of the Tor traffic, so there is little that can be done to trace either legitimate or illegitimate traffic (or to filter one from the other). Attempts to seize this router will accomplish nothing. Furthermore, this machine also serves as a carrier of email, which means that its contents are further protected under the ECPA. 18 USC 2707 explicitly allows for civil remedies (\$1000/

account plus legal fees) in the event of a seizure executed without good faith or probable cause (it should be clear at this point that traffic with an originating IP address of 93.184.66.227 should not constitute probable cause to seize the machine). Similar considerations exist for 1st amendment content on this machine. If you are a representative of a company who feels that this router is being used to violate the DMCA, please be aware that this machine does not host or contain any illegal content. Also be aware that network infrastructure maintainers are not liable for the type of content that passes over their equipment, in accordance with DMCA "safe harbor" provisions. In other words, you will have just as much luck sending a takedown notice to the Internet backbone providers. Please consult EFF's prepared response for more information on this matter.

### Ribollita

<http://www.nytimes.com/recipes/1016052/ribollita.html>

> INGREDIENTS > > 5 tablespoons olive oil > 1 small onion, chopped > 1 carrot, chopped > 1 celery stalk, chopped > 1 tablespoon minced garlic > Salt and ground black pepper > 2 cups cooked or canned cannellini beans > 1 15-ounce can whole peeled tomatoes > 4 cups vegetable stock or water > 1 fresh rosemary sprig > 1 fresh thyme sprig > 1 pound chopped kale or escarole > 4 large, thick slices whole-grain bread, toasted > 1 small red onion, thinly sliced > 1/2 cup freshly grated Parmesan > PREPARATION > > 1. > Put 2 tablespoons of the oil in a large pot over medium heat. When it's hot, add onion, carrot, celery and garlic; sprinkle with salt and pepper and cook, stirring occasionally, until vegetables are soft, 5 to 10 minutes. > 2. > Heat the oven to 500 degrees. Drain the beans; if they're canned, rinse them as well. Add them to the pot along with tomatoes and their juices and stock, rosemary and thyme. Bring to a boil, then reduce heat so the soup bubbles steadily; cover and cook, stirring once or twice to break up the tomatoes, until the flavors meld, 15 to 20 minutes. > 3. > Fish out and discard rosemary and thyme stems, if you like, and stir in kale. Taste and adjust seasoning. Lay bread slices on top of the stew so they cover the top and overlap as little as possible. Scatter red onion slices over the top, drizzle with the remaining 3 tablespoons oil and sprinkle with Parmesan. > 4. > Put the pot in the oven and bake until the bread, onions and cheese are browned and crisp, 10 to 15 minutes. (If your pot fits under the broiler, you can also brown the top there.) Divide the soup and bread among 4 bowls and serve. > YIELD 4 servings > TOTAL TIME About 50 minutes

## Cassoulet with Lots of Vegetables

[http://dinersjournal.blogs.nytimes.com/2009/02/19/cassoulet-and-kids/?\\_php=true&\\_type=blogs&\\_php=true&\\_type=blogs&\\_r=1](http://dinersjournal.blogs.nytimes.com/2009/02/19/cassoulet-and-kids/?_php=true&_type=blogs&_php=true&_type=blogs&_r=1)

> Yield 4 to 6 servings > Time 40 minutes > > Cassoulet is one of the best of the myriad of traditional European > dishes that combine beans and meat to produce wonderful rich, > robust stews. This recipe maintains that spirit, but is much faster, > easier, less expensive, and more contemporary, emphasizing the > beans and vegetables over meat. (That probably makes it more, > not less, traditional, since meat was always hard to come by before > the mid-20th century.) > Ingredients > 2 tablespoons olive oil > 1 pound Italian sausages, bone-in pork chops, confit duck legs, or duck breasts, or a combination > 1 tablespoon chopped garlic > 2 leeks or onions, trimmed, washed, and sliced > 2 carrots, peeled and cut into 1-inch lengths > 3 celery stalks, cut into 1/2-inch pieces > 2 medium zucchinis or 1 small head green cabbage, cut into 1/2-inch pieces > Salt and freshly ground black pepper > 4 cups chopped tomatoes, with their juice (canned are fine) > 1/4 cup fresh chopped parsley leaves > 1 tablespoon fresh chopped thyme leaves > 2 bay leaves > 4 cups cooked white beans (canned are OK), drained and liquid reserved in any case > 2 cups stock, dry red wine, bean cooking liquid, or water, plus more as needed > 1/8 teaspoon cayenne pepper, or to taste > Method > 1. Heat the olive oil in a large saucepan over medium-high heat, add the meat, and cook, turning as needed, until the meat is deeply browned on all sides, about 10 minutes. Remove from the pan and drain off all but 2 tablespoons of the fat. > 2. Turn the heat to medium and add the garlic, leeks or onions, carrots, celery, and zucchini or cabbage; and sprinkle with salt and pepper and cook until softened, about 5 minutes. Add the tomatoes, their liquid, the reserved meat, and the herbs and bring to a boil. Add the beans; bring to a boil again, stirring occasionally, then reduce the heat so the mixture bubbles gently but continuously. Cook for about 20 minutes, adding the liquid when the mixture gets thick and the vegetables are melting away. > 3. Fish out the meat and remove the

bones and skin as needed. Chop into chunks and return to the pot along with the cayenne. Cook another minute or two to warm through, then taste and adjust seasoning if necessary and serve.

## Where Time Comes From on Vimeo

<http://vimeo.com/87871443>

The time that ends up on your smartphone—and that synchronizes GPS, military operations, financial transactions, and internet communications—originates in a set of atomic clocks on the grounds of the U.S. Naval Observatory. Dr. Demetrios Matsakis, Chief Scientist for USNO's Time Services, gives a tour. See more:

### **squashing commits with rebase**

<http://gitready.com/advanced/2009/02/10/squashing-commits-with-rebase.html>

> The rebase command has some awesome options available in its --interactive (or -i) mode, and one of the most widely used is the ability to squash commits. What this does is take smaller commits and combine them into larger ones, which could be useful if you're wrapping up the day's work or if you just want to package your changes differently. We're going to go over how you can do this easily.

howto, git, versioncontrol, squash

### **Docco**

<http://jashkenas.github.io/docco/>

Docco is a quick-and-dirty documentation generator, written in Literate CoffeeScript. It produces an HTML document that displays your comments intermingled with your code. All prose is passed through Markdown, and code is passed through Highlight.js syntax highlighting. This page is the result of running Docco against its own source file.

*documentation, programming, coffeescript, markdown, javascript*

**Live Dead: Epic Grateful Dead TV appearance from their legendary 1972 European tour**

[http://dangerousminds.net/comments/live\\_dead\\_epic\\_grateful\\_dead\\_tv\\_appearance\\_from\\_their\\_legendary\\_1972\\_euro](http://dangerousminds.net/comments/live_dead_epic_grateful_dead_tv_appearance_from_their_legendary_1972_euro)

Although the Grateful Dead had already played one memorable gig in France in June of 1971 at the ("Honky") Château d'Hérouville recording studio, that was more of a spontaneous hippie "happening" than a concert performed in front of a ticketed audience. It wasn't until 1972 that the group properly toured Europe. By then there was a lot of pent up demand to see the Dead and the band was inspired by the reception they received from their non-English speaking fans. One stop, well two, along that legendary trek occurred at the Tivolis Koncertsal in Copenhagen. The band played the Tivolis on April 14 and then three days later they returned for a second concert that was broadcast live—part...

## **Project Morpheus**

[https://en.wikipedia.org/wiki/Project\\_Morpheus](https://en.wikipedia.org/wiki/Project_Morpheus)

> Project Morpheus is a NASA project to develop a vertical takeoff and landing (VTOL) test vehicle called Morpheus Lander in order to demonstrate a new nontoxic spacecraft propellant system (methane and oxygen) and an autonomous landing and hazard detection technology. The prototype planetary lander is capable of vertical takeoff and landings. The vehicles are NASA designed robotic landers that will be able to land and takeoff with 1,100 pounds (500 kg) of cargo on the Moon. The prospect is an engine that runs reliably on propellants that are not only cheaper and safer here on Earth, but could also be potentially manufactured on the Moon or even Mars.

## The Weight of Mountains on Vimeo

<http://vimeo.com/87651855>

This is a short film about the processes by which mountains are created and eventually destroyed. It is based upon the work of British geographer L. Dudley Stamp, and was shot in Iceland. Physical geography and geology is an enormous and fascinating subject, and this film only touches upon the surface of the discipline. For those who wish to further advance their knowledge in this field, additional reading and research is recommended. ## JavaScript MVC Style Guide

<http://blog.sourcing.io/mvc-style-guide>

Controllers Controllers are the glue between views and models. Most of their logic concerns event management. Keep controllers skinny. Any communication between children and parent controllers should use events (do not pass an instance of the parent around). Should only know about sub controllers. Should be scoped to a single element, and not access or alter other parts of the DOM. Should have a unique class name, and all CSS relevant to this controller should be namespaced by this class name. Should work even if their element is not appended to the DOM tree. This is useful for testing and demonstrating the controller is properly scoped. Should be testable by firing events programmatically on their sub elements. Should be able to be re-rendered at any time without adverse effects. Should not use the DOM to store state — keep any view specific state stored as instance properties in the controller. Views Should be logic less except for flow control and helper functions. Should be passed all the data they need to render directly. It should all be available in the current scope. Models Should purely be concerned with data, manipulating data and decorating data. Should never access controllers or views. Should never access or return DOM nodes. Should only access or require other models at runtime. Should abstract away XHR connections from the rest of the application. Should contain all data validations. Routers Should be as logic-less as possible. Should not know about or access the DOM. Global state Should be kept to a minimum as it arguably violates MVC. You can't get around it for some things though, like the current user, current view, CSRF token etc. Should never be stored in global variables. Should all be stored in one place (such as a singleton instance of a model). Modules You should always use a module system, whether it's CommonJS, AMD, ES6 modules, or something equivalent. Never set or access global variables.

### **GeoJSON**

<https://en.wikipedia.org/wiki/GeoJSON>

GeoJSON is an open standard format for encoding collections of simple geographical features along with their non-spatial attributes using JavaScript Object Notation. The features include points (therefore addresses and locations), line strings (therefore streets, highways and boundaries), polygons (countries, provinces, tracts of land), and multi-part collections of these types. GeoJSON features need not represent entities of the physical world only; mobile routing and navigation apps, for example, might describe their service coverage using GeoJSON.

javascript, json, maps, data, wikipedia

## TopoJSON

<https://en.wikipedia.org/wiki/TopoJSON>

TopoJSON is a file format, console script, and a client side JavaScript library to store and process GIS data with geospatial topology. A major improvement over GeoJSON is that TopoJSON files collects lines as arcs made of sequences of points, and then defines both complex polylines and polygons as sequences of previously defined arcs. Shapes are sequences of arcs, arcs are sequences of points. Each arc is defined once and only once, but could be called several times, thus reducing redundancy, decreasing the file size, easing edits of neighbor shapes in an unified edit on the common arc(s) thus avoiding artifacts apparitions. The client side JavaScript library converts TopoJSON files into GeoJSON which allows other systems such D3.js to use this GIS data and generate SVG graphisms. The console script allows the conversion of GIS files (shapefiles, GeoJSON, etc.) into lighter TopoJSON files, as well as various basic processing such simplification, merge, conserve selected properties, append external data, etc.

## Forward secrecy

[https://en.wikipedia.org/wiki/Forward\\_secrecy](https://en.wikipedia.org/wiki/Forward_secrecy)

> In cryptography, forward secrecy (also known as perfect forward secrecy or PFS) is a property of key-agreement protocols that ensures that a session key derived from a set of long-term keys will not be compromised if one of the long-term keys is compromised in the future. The key used to protect transmission of data must not be used to derive any additional keys, and if the key used to protect transmission of data was derived from some other keying material, that material must not be used to derive any more keys. Thus, compromise of a single key will permit access only to data protected by a single key.

## Longform Reprints: Stickeen: The Story of a Dog by John Muir

<http://longform.org/stories/stickeen-john-muir>

> He knew very well what I meant, and at last, with the courage of despair, hushed and breathless, he crouched down on the brink in the hollow I had made for my knees, pressed his body against the ice as if trying to get the advantage of the friction of every hair, gazed into the first step, put his little feet together and slid them slowly, slowly over the edge and down into it, bunching all four in it and almost standing on his head. Then, without lifting his feet, as well as I could see through the snow, he slowly worked them over the edge of the step and down into the next and the next in succession in the same way, and gained the end of the bridge. Then, lifting his feet with the regularity and slowness of the vibrations of a seconds pendulum, as if counting and measuring one-two-three , holding himself steady against the gusty wind, and giving separate attention to each little step, he gained the foot of the cliff, while I was on my knees leaning over to give him a lift should he succeed in getting within reach of my arm. Here he halted in dead silence, and it was here I feared he might fail, for dogs are poor climbers. I had no cord. If I had had one, I would have dropped a noose over his head and hauled him up. But while I was thinking whether an available cord might be made out of clothing, he was looking keenly into the series of notched steps and finger-holds I had made, as if counting them, and fixing the position of each one of them in his mind. Then suddenly up he came in a springy rush, hooking his paws into the steps and notches so quickly that I could not see how it was done, and whizzed past my head, safe at last! > > And now came a scene! "Well done, well done, little boy! Brave boy!" I cried, trying to catch and caress him; but he would not be caught. Never before or since have I seen anything like so passionate a revulsion from the depths of despair to exultant, triumphant, uncontrollable joy. He flashed and darted hither and thither as if fairly demented, screaming and shouting, swirling round and round in giddy loops and circles like a leaf in a whirlwind, lying down, and rolling over and over, sidewise and heels over head, and pouring forth a tumultuous flood of

hysterical cries and sobs and gasping mutterings. When I ran up to him to shake him, fearing he might die of joy, he flashed off two or three hundred yards, his feet in a mist of motion; then, turning suddenly, came back in a wild rush and launched himself at my face, almost knocking me down. all the while screeching and screaming and shouting as if saying, "Saved! saved! saved!" Then away again, dropping suddenly at times with his feet in the air, trembling and fairly sobbing. Such passionate emotion was enough to kill him. Moses' stately song of triumph after escaping the Egyptians and the Red Sea was nothing to it. Who could have guessed the capacity of the dull, enduring little fellow for all that most stirs this mortal frame? Nobody could have helped crying with him! > > But there is nothing like work for toning down excessive fear or joy. So I ran ahead, calling him in as gruff a voice as I could command to come on and stop his nonsense, for we had far to go and it would soon be dark. Neither of us feared another trial like this. Heaven would surely count one enough for a lifetime. The ice ahead was gashed by thousands of crevasses, but they were common ones. The joy of deliverance burned in us like fire, and we ran without fatigue, every muscle with immense rebound glorying in its strength. Stickeen flew across everything in his way, and not till dark did he settle into his normal fox-like trot. At last the cloudy mountains came in sight, and we soon felt the solid rock beneath our feet, and were safe. Then came weakness. Danger had vanished, and so had our strength. We tottered down the lateral moraine in the dark, over boulders and tree trunks, through the bushes and devil-club thickets of the grove where we had sheltered ourselves in the morning, and across the level mudslope of the terminal moraine. We reached camp about ten o'clock, and found a big fire and a big supper. A party of Hoona Indians had visited Mr. Young, bringing a gift of porpoise meat and wild strawberries, and Hunter Joe had brought in a wild goat. But we lay down, too tired to eat much, and soon fell into a troubled sleep. The man who said, "The harder the toil, the sweeter the rest," never was profoundly tired. Stickeen kept springing up and muttering in his sleep, no doubt dreaming that he was still on the brink of the crevasse; and so did I, that

## MARCH

night and many others long afterward, when I was over-tired. > > Thereafter Stickeen was a changed dog. During the rest of the trip, instead of holding aloof, he always lay by my side, tried to keep me constantly in sight, and would hardly accept a morsel of food, however tempting, from any hand but mine. At night, when all was quiet about the camp-fire, he would come to me and rest his head on my knee with a look of devotion as if I were his god. And often as he caught my eye he seemed to be trying to say, "Wasn't that an awful time we had together on the glacier?"

## Thinking About Mozilla

<http://incisive.nu/2014/thinking-about-mozilla/>

> Brendan, I grew up in a very conservative religious home and many of the people I love the most can still be described as very religious and very conservative. I think your views on this issue are wrong, and that your actions have done harm, but I can no more caricature you as a terrible person driven by homophobia and hatred than I can break off relations with my cherished family members because they take actions similar to yours. > > If you stay on as CEO, I look forward to seeing you act with the clear commitment to equality and inclusiveness in the workplace that your posts have affirmed. [Graf edited to clarify and add link.] > > And more personally, whatever it is that makes you feel that the institution of marriage is threatened by the desire for equal legal rights of people like me, I hope that sense of threat eventually lessens. I don't wish this for myself—the tide of our culture is already turning and I do believe that history is bending toward justice. I hope it for you and for your family, sincerely and with love. > > Now I'm going to get to work.

## Dream Song #279

<http://www.fsgworkinprogress.com/2014/04/dream-song-279/>

Leaving behind the country of the dead where he must then return & die himself he set his tired face due East where the sun rushes up the North Atlantic and where had paused a little the war for bread & the war for status has ceased forever, and he took with him five books, a Whitman & a Purgatorio, a one-volume dictionary, an Oxford Bible with all its bays & nooks & bafflements long familiar to Henry & one other new book-O. If ever he had crafted in the past— but only if—he swore now to craft better which lay in the Hands above. He said: I'll work on slow, O slow & fast, if a letter comes I will answer that letter & my whole year will be tense with love.

## How a Container Ship Flexes in High Seas

<http://motherboard.vice.com/read/how-a-container-ship-flexes-in-high-seas>

> Any massive seafaring ship worth its weight in salt is designed to flex through rough waters—the maritime engineers and architects who build these things pore over a range of calculations to allow big ships to twist slowly side to side like a sea snake on Ativan, and also bow up and down (this is what's known as hog and sag.) If not for these applied mathematical, the vessels would literally snap apart.

## Gymnopédies

[https://en.wikipedia.org/wiki/Gymnop%C3%A9dies\\_\(Satie\)](https://en.wikipedia.org/wiki/Gymnop%C3%A9dies_(Satie))

> The Gymnopédies, published in Paris starting in 1888, are three piano compositions written by French composer and pianist Erik Satie. > > These short, atmospheric pieces are written in 3/4 time, with each sharing a common theme and structure. Collectively, the Gymnopédies are regarded as an important precursor to modern ambient music[1] — gentle yet somewhat eccentric pieces which, when composed, defied the classical tradition.[citation needed] For instance, the first few bars of Gymnopédie No. 1 consist of an alternating progression of two major seventh chords, the first on the subdominant, G, and the second on the tonic, D.

### **Windham Hill Records**

[https://en.wikipedia.org/wiki/Windham\\_Hill\\_Records](https://en.wikipedia.org/wiki/Windham_Hill_Records)

> Windham Hill Records is a subsidiary of Sony Music Entertainment specializing in Acoustic, New Age and Folk music. Originally founded in 1976 as an Independent record label by guitarist and carpenter William Ackerman and his then-wife Anne Robinson, Windham Hill was a successful and well-respected music label during its height in the 1980s and 90s. The label was purchased by BMG through a series of buyouts from 1992 through 1996 and is currently a subsidiary of Sony Music Entertainment after BMG's subsequent merger in 2008. Private Music, also a subsidiary of BMG, has issued some back-catalog releases under the Windham Hill Records imprint. Since the Sony merger, Windham Hill currently releases no new material but recycles albums and compilations as part of Sony's Legacy Recordings brand.

### **microjs**

<http://microjs.com/#>

How much library code do you really need — 50K? 100K? 150K? More? How much of that do you really use? Sure, we all love our favorite monolithic frameworks, and sometimes we even use them fully. But how often do we reach for the ride-on John Deere tractor with air conditioning and six-speaker sound system, when a judiciously applied pocketknife would do the trick better, faster, slicker? Micro-frameworks are definitely the pocketknives of the JavaScript library world: short, sweet, to the point. And at 5k and under, micro-frameworks are very very portable. A micro-framework does one thing and one thing only — and does it well. No cruft, no featuritis, no feature creep, no excess anywhere. Microjs.com helps you discover the most compact-but-powerful microframeworks, and makes it easy for you to pick one that'll work for you.

### Angular.js: service vs provider vs factory?

<https://stackoverflow.com/questions/15666048/angular-js-service-vs-provider-vs-factory/15666049#15666049>

Services Syntax: module.service( 'serviceName', function );  
Result: When declaring serviceName as an injectable argument you will be provided with an instance of the function. In other words new FunctionYouPassedToService(). Factories Syntax:  
module.factory( 'factoryName', function ); Result: When declaring factoryName as an injectable argument you will be provided with the value that is returned by invoking the function reference passed to module.factory.  
Providers Syntax: module.provider( 'providerName', function ); Result: When declaring providerName as an injectable argument you will be provided with ProviderFunction().\$get(). The constructor function is instantiated before the \$get method is called - ProviderFunction is the function reference passed to module.provider. Providers have the advantage that they can be configured during the module configuration phase.

## **Jefferson (proposed Pacific state)**

[https://en.wikipedia.org/wiki/  
Jefferson\\_\(proposed\\_Pacific\\_state\)](https://en.wikipedia.org/wiki/Jefferson_(proposed_Pacific_state))

The State of Jefferson is a proposed U.S. state that would span the contiguous, mostly rural area of southern Oregon and northern California, where several attempts to secede from Oregon and California, respectively, have taken place in order to gain statehood. This region on the Pacific Coast is the most famous of several that have sought to adopt the name of Thomas Jefferson, the third President of the United States. Thomas Jefferson sent the Lewis and Clark expedition into the Pacific Northwest in 1803, and envisioned the establishment of an independent nation in the western portion of North America which he dubbed the "Republic of the Pacific", hence the association of his name with regional autonomy. The independence movement (rather than statehood) is instead known as Cascadia. The name "Jefferson" has also been used for other proposed states: the name was proposed in the 19th century for Jefferson Territory (roughly modern Colorado), as well as in 1915 in a bill in the Texas legislature for a proposed state that would be created from the Texas Panhandle region.

### Cryptography Portal

<https://en.wikipedia.org/wiki/Portal:Cryptography>

Cryptography (from Greek κρύπτω, "to hide, to conceal, to obscure", and γράφω, "to etch, to inscribe, to write down") is, traditionally, the study of means of converting information from its normal, comprehensible form into an incomprehensible format, rendering it unreadable without secret knowledge — the art of encryption. Cryptography is often used to replace or in combination with steganography. In the past, cryptography helped ensure secrecy in important communications, such as those of spies, military leaders, and diplomats. In recent decades, the field of cryptography has expanded its remit in two ways. Firstly, it provides mechanisms for more than just keeping secrets: schemes like digital signatures and digital cash, for example. Secondly, cryptography has come to be in widespread use by many civilians who do not have extraordinary needs for secrecy, although typically it is transparently built into the infrastructure for computing and telecommunications, and users are not aware of it.

### Kalmiopsis Wilderness

[https://en.wikipedia.org/wiki/Kalmiopsis\\_Wilderness](https://en.wikipedia.org/wiki/Kalmiopsis_Wilderness)

> Kalmiopsis Wilderness is a wilderness area in the Klamath Mountains of southwestern Oregon, within the Rogue River-Siskiyou National Forest. It was designated wilderness by the United States Congress in 1964 and now comprises a total of 179,755 acres (72,744 ha). There are approximately 153 miles (246 km) of trails on 24 established hiking trails in the area. > > The Kalmiopsis Wilderness was named for Kalmiopsis leachiana, a slow-growing plant related to the rhododendron, which was discovered in the area in 1930.

### **Éliane Radigue**

[https://en.wikipedia.org/wiki/Eliane\\_Radigue](https://en.wikipedia.org/wiki/Eliane_Radigue)

> Éliane Radigue (born January 24, 1932) is a French electronic music composer. She started her work in the 1950s and her first creations were presented in the late 1960s. Until 2000 her work was almost exclusively created on a single synthesizer, the ARP 2500 modular system and tape. Since 2001 she composed mostly for acoustic instruments.

### **Euthanasia Coaster**

[https://en.wikipedia.org/wiki/Euthanasia\\_Coaster](https://en.wikipedia.org/wiki/Euthanasia_Coaster)

> The Euthanasia Coaster is an art concept for a steel roller coaster designed to kill its passengers. In 2010, it was designed and made into a scale model by Julijonas Urbonas, a PhD candidate at the Royal College of Art in London. Urbonas, who has worked at an amusement park, stated that the goal of his concept roller coaster is to take lives "with elegance and euphoria". As for practical applications of his design, Urbonas mentioned "euthanasia" or "execution". John Allen, who served as president of the Philadelphia Toboggan Company, inspired Urbonas with his description of the "ultimate" roller coaster as one that "sends out 24 people and they all come back dead". As it would euthanise its passengers, it was criticised by the anti-euthanasia association Care Not Killing.

## Colors of noise

[https://en.wikipedia.org/wiki/Colors\\_of\\_noise](https://en.wikipedia.org/wiki/Colors_of_noise)

> In audio engineering, electronics, physics, and many other fields, the color of a noise signal (a signal produced by a stochastic process) is generally understood to be some broad characteristic of its power spectrum. > > Different "colors" of noise have significantly different properties: for example, as audio signals they will sound differently to human ears, and as images they will have a visibly different texture. Therefore, each application typically requires noise of a specific "color". > > This sense of "color" for noise signals is similar to the concept of timbre in music (which is also called "tone color"); however the latter is almost always used for sound, and may consider very detailed features of the spectrum. > > The practice of naming kinds of noise after colors started with "white noise", a signal whose spectrum has equal power within any equal interval of frequencies. That name was given by analogy with "white light", which was (incorrectly) assumed to have such a "flat" power spectrum over the visible range. Other color names, like "pink", "red", and "blue" were then given to noise with other spectral profiles; often (but not always) in reference to the color of light with similar spectra. Some of those names have standard definitions in certain disciplines, while others are very informal and poorly defined.

## How To Cook A Fucking Steak

<http://www.theawl.com/2009/11/how-to-cook-a-fucking-steak>

> Go to the goddamn grocery and get steak. Yes, the grocery. A little ammonia is not going to kill you, you pussy. You want to be all fancy and grass-fed and environmentally conscious, go ahead, I don't give a shit, just get a fucking steak. Ribeye is good. And, yes, bone-in. Schmuck. Take the steak home. Get a bigass frying pan and put the shit on the stove, cranking the heat up as far as that fucker will go. Take a shitload of salt—rocksalt, you dumb motherfucker, none of that fine-grained crap here—and toss it around the bottom of the pan. When the pan is hot as all fuck—it should scorch the shit out of your finger if you're stupid enough to touch it—put the fucking steak on there. You can crack some pepper on the top of the steak as the bottom is searing, but don't even talk to me about garlic or onion powder or COMPOUND FUCKING BUTTER, asshole. This is steak, all you fucking need is salt and pepper. After a bit (3 minutes for pink, 5 for cooked good), flip that shit over and do the same fucking thing you just did with the other side, i.e. sit on your ass and wait for your motherfucking steak to be ready, you useless assbag. When you're done, sling that shit on a plate. Beringer's 1996 Cabernet Sauvignon Napa Valley Private Reserve makes an absolutely delightful accompaniment, particularly if you've taken care to let it breathe a bit before quaffing. Also, make some fucking potatoes, because that's what you eat with a fucking steak. God, sometimes I just want to smack the shit out of you.

## **Obscure Records**

[http://en.wikipedia.org/wiki/Obscure\\_Records](http://en.wikipedia.org/wiki/Obscure_Records)

Obscure Records was a U.K. record label which existed from 1975 to 1978. It was created and run by Brian Eno, who also produced the albums (credited as executive producer in one instance). Ten albums were issued in the series. Most have detailed liner notes on their back covers, analyzing the compositions and providing a biography of the composer, in a format typical of classical music albums, and much of the material can be regarded as 20th century classical music. The label provided a venue for experimental music, and its association with Eno gave increased public exposure to its composers and musicians.

### **On the Origin of Species: The Preservation of Favoured Traces | Ben Fry**

<http://benfry.com/traces/>

> We often think of scientific ideas, such as Darwin's theory of evolution, as fixed notions that are accepted as finished. In fact, Darwin's *On the Origin of Species* evolved over the course of several editions he wrote, edited, and updated during his lifetime. The first English edition was approximately 150,000 words and the sixth is a much larger 190,000 words. In the changes are refinements and shifts in ideas — whether increasing the weight of a statement, adding details, or even a change in the idea itself. > The second edition, for instance, adds a notable "by the Creator" to the closing paragraph, giving greater attribution to a higher power. In another example, the phrase "survival of the fittest" — usually considered central to the theory and often attributed to Darwin — instead came from British philosopher Herbert Spencer, and didn't appear until the fifth edition of the text. Using the six editions as a guide, we can see the unfolding and clarification of Darwin's ideas as he sought to further develop his theory during his lifetime.

## Biomorphs

<http://www.emergentmind.com/biomorphs>

> Biomorphs are virtual entities that were devised by Richard Dawkins in his book The Blind Watchmaker as a way to visualize the power of evolution. > In this implementation there are 9 biomorphs: 1 parent in the center and its 8 children surrounding it. The children's genes are identical to its parent's genes except for a single mutation which changes its appearance slightly. You can select which child you want to become the parent in the next generation by clicking on it. By repeating this process, you can see how the biomorphs evolve over time.

remain unclear because it has insufficient... .

## Dijkstra's algorithm

[https://en.wikipedia.org/wiki/Dijkstra%27s\\_algorithm](https://en.wikipedia.org/wiki/Dijkstra%27s_algorithm)

> Dijkstra's algorithm, conceived by computer scientist Edsger Dijkstra in 1956 and published in 1959, is a graph search algorithm that solves the single-source shortest path problem for a graph with non-negative edge path costs, producing a shortest path tree. This algorithm is often used in routing and as a subroutine in other graph algorithms. > > For a given source vertex (node) in the graph, the algorithm finds the path with lowest cost (i.e. the shortest path) between that vertex and every other vertex. It can also be used for finding costs of shortest paths from a single vertex to a single destination vertex by stopping the algorithm once the shortest path to the destination vertex has been determined. For example, if the vertices of the graph represent cities and edge path costs represent driving distances between pairs of cities connected by a direct road, Dijkstra's algorithm can be used to find the shortest route between one city and all other cities. As a result, the shortest path algorithm is widely used in network routing protocols, most notably IS-IS and OSPF (Open Shortest Path First). > > Dijkstra's original algorithm does not use a min-priority queue and runs in time  $O(|V|^2)$  (where  $|V|$  is the number of vertices). The idea of this algorithm is also given in (Leyzorek et al. 1957). The implementation based on a min-priority queue implemented by a Fibonacci heap and running in  $O(|E| + |V|\log|V|)$  (where  $|E|$  is the number of edges) is due to (Fredman & Tarjan 1984). This is asymptotically the fastest known single-source shortest-path algorithm for arbitrary directed graphs with unbounded non-negative weights.

## History of Unix

[https://en.wikipedia.org/wiki/History\\_of\\_Unix](https://en.wikipedia.org/wiki/History_of_Unix)

> The history of Unix dates back to the mid-1960s when the Massachusetts Institute of Technology, AT&T Bell Labs, and General Electric were developing an experimental time sharing operating system called Multics for the GE-645 mainframe. Multics introduced many innovations, but had many problems. > > Bell Labs, frustrated by the size and complexity of Multics but not the aims, slowly pulled out of the project. Their last researchers to leave Multics, Ken Thompson, Dennis Ritchie, M. D. McIlroy, and J. F. Ossanna, decided to redo the work on a much smaller scale. In 1979, Dennis Ritchie described their vision for Unix: > > What we wanted to preserve was not just a good environment in which to do programming, but a system around which a fellowship could form. We knew from experience that the essence of communal computing, as supplied by remote-access, time-shared machines, is not just to type programs into a terminal instead of a keypunch, but to encourage close communication. > > While Ken Thompson still had access to the Multics environment, he wrote simulations for the new file and paging system on it. He also programmed a game called Space Travel, but the game needed a more efficient and less expensive machine to run on, and eventually he found a little-used PDP-7 at Bell Labs. On this PDP-7, in 1969, a team of Bell Labs researchers led by Thompson and Ritchie, including Rudd Canaday, developed a hierarchical file system, the concepts of computer processes and device files, a command-line interpreter, and some small utility programs.

## Monad (functional programming)

[http://en.wikipedia.org/wiki/Monad\\_\(functional\\_programming\)](http://en.wikipedia.org/wiki/Monad_(functional_programming))

> In functional programming, a monad is a structure that represents computations defined as sequences of steps. A type with a monad structure defines what it means to chain operations, or nest functions of that type together. This allows the programmer to build pipelines that process data in steps, in which each action is decorated with additional processing rules provided by the monad. As such, monads have been described as "programmable semicolons"; a semicolon is the operator used to chain together individual statements in many imperative programming languages, thus the expression implies that extra code will be executed between the statements in the pipeline. Monads have also been explained with a physical metaphor as assembly lines, where a conveyor belt transports data between functional units that transform it one step at a time. They can also be seen as a functional design pattern to build generic types.

## Getting high on programming

<http://kottke.org/14/06/getting-high-on-programming>

> When code doesn't work within the specifications, it's 100% broken. It won't compile, the web server throws an error, or gives the wrong output. Writing and design almost always sorta work...even a first draft or an initial design communicates something to the reader/viewer. When the code works within the specifications, it's done. The writing or design process is never done; even a great piece of writing or the best design can be improved incrementally or even scrapped altogether to go in a different and potentially more fruitful direction. Maybe, for me, programming's definite ending is what makes it so enjoyable. The flow state comes from knowing that, while the journey is difficult and maddening and messily creative (just as with writing or design), there's a definite point at which it's done and you can move on to the next challenge.

## Ambient 2: The Plateaux of Mirror

<http://pitchfork.com/reviews/albums/11731-discreet-musicambient-1-music-for-airportsambient-2-the-plateaux-of-mirror-with-harold-buddambient-4-on-land/>

> Ambient 4: On Land (1982) has been cited by both Eno and many fans as his best work. It's a complete realization of several artistic aims, and of all his albums it remains the most distinctive-- there are hardly any successful imitators of its unique universe. As Discreet Music foretold the manner by which Eno would realize self-contained musical environments, On Land presages the sound of several musical elements acting independently, coinciding only by chance yet remaining cohesive. The tracks of On Land, all fairly unchanging environments in this way, seem to similarly extend infinitely past the boundaries of their beginnings and ends. > Eno has talked of finding his inspiration for On Land in Ghana, when he used a microphone and headphones to hear the conflated sounds of his surrounding radius. "The effect of this simple technological system was to cluster all the disparate sounds into one aural frame; they became music." (For a demonstration of this effect, just walk around outside with a microphone amplified into a pair of headphones: It really is striking to hear the world flattened into two dimensions upon one's ears.) The result was an attempt to make dense "worlds" of sound using the same sense of disparate yet spatially connected elements. The album is both more varied than his other ambient works and more foreboding. The atmospheres in many of On Land's pieces are so dense as to leave one staring down a chasm of sound, with no visible bottom apparent. Eno used several nonmusical objects and field recordings to contribute to On Land's thick aural web, the album being a testament to Eno's use of the studio as an instrument. On Land intensifies the most subtle and indescribable of emotions, and it stands at the forefront of the transformative possibilities inherent in non-rhythmic, non-melodic music.

### **Sea slug**

[http://en.wikipedia.org/wiki/Sea\\_slug](http://en.wikipedia.org/wiki/Sea_slug)

> Sea slug is a common name which is applied to some marine invertebrates that more or less resemble terrestrial slugs. The name "sea slug" is most often applied to nudibranchs, as well as to a paraphyletic set of other marine gastropods without obvious shells. The name is also applied to some taxa in other phyla, such as the sea cucumbers, which are echinoderms.

## Audiocogs

<http://audiocogs.org/>

> At Audiocogs we want make the web a better place for audio, or better yet, make the web the best place for audio to be. We're a group of friends who used to work together in a research & development team dedicated to exactly this task, our work often being writing open source libraries that push the limits of the web as we know it. We've gone our separate ways professionaly, but we're still committed to the same goals and continue to pursue them on our own time. > > We are working with a lot of cutting-edge technology that we believe shouldn't be cutting-edge anymore, trying to make the possibilities available to everyone, everywhere. This means JavaScript codecs, audio processing and other things that come with the territory. Pioneering on these new technologies, we also believe in good faith that we should communicate our learnings to give back to the community by blogging about our work, speaking about it publicly, and helping out in organizing events where this is possible.

### **Pine Creek Gorge**

[http://en.wikipedia.org/wiki/Pine\\_Creek\\_Gorge](http://en.wikipedia.org/wiki/Pine_Creek_Gorge)

> Pine Creek Gorge, sometimes called The Grand Canyon of Pennsylvania, is a 47-mile (76 km) gorge carved by Pine Creek in Pennsylvania. It sits in about 160,000 acres (650 km<sup>2</sup>) of the Tioga State Forest. The canyon begins south of Ansonia, near Wellsboro, along U.S. Route 6 and continues south. Its deepest point is 1,450 feet (440 m) at Waterville, near the southern end. At Leonard Harrison and Colton Point State Parks, it is more than 800 feet (240 m) deep and the distance rim-to-rim is about 4,000 feet (1,200 m).

## **Old Albany Post Road**

*https://en.wikipedia.org/wiki/Old\_Albany\_Post\_Road*

> Old Albany Post Road is a 6.6-mile (10.6 km) dirt road in Philipstown, New York, one of the oldest unpaved roads still in use in the United States. It runs mostly north-south through the southeastern corner of the town, near the Putnam Valley town line. Starting from an intersection with Sprout Brook Road at Continental Village just north of the Putnam-Westchester county line, it ends at an oblique junction with US 9 east of Garrison.

## Petrichor

<https://en.wikipedia.org/wiki/Petrichor>

> Petrichor (/pətrɪkɔər/) is the scent of rain on dry earth, or the scent of dust after rain. The word is constructed from Greek, petros, meaning 'stone' + ichor, the fluid that flows in the veins of the gods in Greek mythology. It is defined as "the distinctive scent which accompanies the first rain after a long warm dry spell".

### **The Future Programming Manifesto**

<http://alarmingdevelopment.org/?p=893>

> Computer Science has decided that, being a Science, it must rigorously evaluate results with empirical experiments or mathematical proofs. We are not doing Science. We are doing Design: using experience and judgement to make complex tradeoffs in order to satisfy qualitative human needs. Yet we still need a disciplined way to evaluate progress. Perhaps we can learn from the methodologies of other fields like Architecture and Industrial Design. This is a meta-problem we must address.

[http://www.nytimes.com/2014/09/02/science/a-mission-  
for-remote-controlled-bugs.html?\\_r=0](http://www.nytimes.com/2014/09/02/science/a-mission-for-remote-controlled-bugs.html?_r=0)

> Researchers from North Carolina State University are  
trying to turn a living moth into a remote-controlled robot,  
or biobot. By attaching tiny electrodes to the moth, they  
can monitor the electrical signals the moth uses flight to  
communicate with its muscles. The researchers, also  
working on a similar project with cockroaches, believe that  
insect biobots could be used to search through rubble  
during rescue missions.

### **BMW R1100GS**

[https://en.wikipedia.org/wiki/BMW\\_R1100GS](https://en.wikipedia.org/wiki/BMW_R1100GS)

> The BMW R1100GS is a dual-sport motorcycle that was launched in 1993, and manufactured from 1994 to 1999 by BMW Motorrad in Berlin, Germany. The bike has a 1,085 cc (66.2 cu in) flat-twin (boxer) engine, first seen in the R1100RS which was launched the year before in 1992, and was the first member of the GS family to use an air-and oil-cooled engine rather than the earlier air-cooled airhead engines which had been used on BMW motorcycles since the R32 in 1923. From 1996 to 2001, a sister model, the smaller capacity 848 cc (51.7 cu in) R850GS, was produced. In 1999, the R1100GS was superseded by the R1150GS.

## Choreographing the Dance of Traffic Lights

<http://www.nytimes.com/1998/09/17/technology/choreographing-the-dance-of-traffic-lights.html>

IN commuter heaven, all traffic lights would magically switch to green for approaching drivers, forming strings of fiery green balls that went on for miles. Pedestrians in paradise would encounter "Walk" signs permanently aglow, and drivers would wait patiently as the walkers dawdled the day away crossing the street. In real life though, drivers inevitably hit red. And in New York City, when they must stop is usually controlled by the intricate computer network governing many of the city's lights, a system based in a single building in Queens, at the Traffic Management Center of the city's Department of Transportation.

### **Gates of the Arctic National Park and Preserve**

[https://en.wikipedia.org/wiki/Gates\\_of\\_the\\_Arctic\\_National\\_Park\\_and\\_Preserve](https://en.wikipedia.org/wiki/Gates_of_the_Arctic_National_Park_and_Preserve)

> Gates of the Arctic National Park and Preserve is a U.S. National Park in Alaska. It is the northernmost national park in the U.S. (the entirety of the park lies north of the Arctic Circle) and the second largest at 8,472,506 acres (3,428,702 ha), slightly larger in area than Belgium. The park consists primarily of portions of the Brooks Range of mountains. It was first protected as a U.S. National Monument on December 1, 1978, before becoming a national park and preserve two years later in 1980 upon passage of the Alaska National Interest Lands Conservation Act. A large part of the park is protected in the Gates of the Arctic Wilderness which covers 7,167,192 acres (2,900,460 ha).<sup>[3]</sup> The wilderness area adjoins the Noatak Wilderness Area and together they form the largest contiguous wilderness in the United States.

## Katmai National Park and Preserve

[http://en.wikipedia.org/wiki/  
Katmai\\_National\\_Park\\_and\\_Preserve](http://en.wikipedia.org/wiki/Katmai_National_Park_and_Preserve)

> Katmai National Park and Preserve is a United States National Park and Preserve in southern Alaska, notable for the Valley of Ten Thousand Smokes and for its brown bears. The park and preserve covers 4,093,077 acres (6,395.43 sq mi; 16,564.09 km<sup>2</sup>), being roughly the size of Wales. Most of this is a designated wilderness area in the national park where all hunting is banned, including over 3,922,000 acres (1,587,000 ha) of land. The park is named after Mount Katmai, its centerpiece stratovolcano. The park is located on the Alaska Peninsula, across from Kodiak Island, with headquarters in nearby King Salmon, about 290 miles (470 km) southwest of Anchorage. The area was first designated a national monument in 1918 to protect the area around the major 1912 volcanic eruption of Novarupta, which formed the Valley of Ten Thousand Smokes, a 40-square-mile (100 km<sup>2</sup>), 100-to-700-foot-deep (30 to 213 m) pyroclastic flow. The park includes as many as 18 individual volcanoes, seven of which have been active since 1900.

## New York Roads Portal

[https://en.wikipedia.org/wiki/Portal:New\\_York\\_Roads](https://en.wikipedia.org/wiki/Portal:New_York_Roads)

The highway system of the U.S. state of New York is a network of roads owned and maintained by several jurisdictions: the state of New York through the New York State Department of Transportation (NYSDOT) and its counties, towns, villages, and cities. The most prominent of these roads are part of one of four numbered route systems in New York, each assigned at a different level of government.

### Pentium FDIV bug

[https://en.wikipedia.org/wiki/Pentium\\_FDIV\\_bug](https://en.wikipedia.org/wiki/Pentium_FDIV_bug)

> The Pentium FDIV bug is a bug in the Intel P5 Pentium floating point unit (FPU). Because of the bug, the processor can return incorrect decimal results, an issue troublesome for the precise calculations needed in fields like math and science. Discovered by Professor Thomas R. Nicely at Lynchburg College, Intel blamed the error on missing entries in the lookup table used by the floating-point division circuitry. > > Though rarely encountered by average users (Byte magazine estimated that 1 in 9 billion floating point divides with random parameters would produce inaccurate results),[3] both the flaw and Intel's initial handling of the matter were heavily criticized. Intel ultimately recalled the defective processors.

### A Field Guide to the True American Diner

<http://www.theawl.com/2014/10/a-field-guide-to-the-true-american-diner>

> Hello, I am an American from New Jersey and I care about diners. > > The True American Diner is a casual sit-down restaurant that serves breakfast, lunch, and dinner—all three meals—all day, often for all twenty-four hours of it. Time has no meaning in the presence of eggs, steak and hash browns. Portions are large but not obscene; sides are available with nearly everything. The food is sturdy and simple, a few strong flavors and techniques. Nothing in a True American Diner couldn't be made by a moderately skilled cook in their own kitchen: corned beef hash, club sandwiches, and a variety of scrambles.

## In the Dark of the Museum

<http://www.nybooks.com/blogs/gallery/2014/sep/27/dark-museum-sugimoto-dioramas/?insrc=hpbl>

> What happens in the darkness of the museum itself, and what is meant to happen, is quite different from Sugimoto's stillness. It's the stillness of the observer, not the dioramas, that feels important. The stillness, the darkness—they are the very opposite of exposure, they provide a kind of protection from the drama of the hungry mammals, from the violence of the scenes; and from the violence, too, of the human natural history giants who lived, and collected, before the dawn of environmentalism. These animals were hunted and shot and collected and stuffed and placed in their cases as confident trophies of the great diversity of the natural world. They are meant to be marveled at, that's why they're there. The conservatism of the generation that created the museum, men like John Muir and John Burroughs and Teddy Roosevelt, grew out of awe more than fear. Nature was not yet itself an endangered species, it was instead a glorious spectacle. That's an illusion, no less than Sugimoto's photographic illusions, but that's what the museum's darkness allows us to experience—that uncomplicated wonder, that innocence.

## **Interpreting the Animal Choices on the World's Most Popular Programming Books**

<http://www.theawl.com/2014/10/interpreting-the-animal-choices-on-the-worlds-most-popular-programming-books>

> If you are a software engineer, or work in an office with software engineers, or have ever been near more than one software engineer, you've seen the O'Reilly programming books with the animals. A bit of digging on the company website reveals that each book's cover animal is selected not by the author but by O'Reilly's creative director, Edie Freedman, who goes on to state: "I never reveal the reasons behind my choices, but I can assure all interested parties that there is always a reason." So in the end, it's up to you to figure out how a Mexican agouti, tarsier, or axolotl will guide you on your programming journey. For now, I did my best to decipher a few myself.

### **Grand Staircase-Escalante National Monument**

[https://en.wikipedia.org/wiki/Grand\\_Staircase-Escalante\\_National\\_Monument](https://en.wikipedia.org/wiki/Grand_Staircase-Escalante_National_Monument)

> The Grand Staircase-Escalante National Monument is a U.S. National Monument protecting 1,880,461 acres (760,996 ha)[1] of land in southern Utah. There are three main regions: the Grand Staircase, the Kaiparowits Plateau, and the Canyons of the Escalante - all of which are administered by the Bureau of Land Management as part of the National Landscape Conservation System. President Bill Clinton designated the area as a national monument in 1996 using his authority under the Antiquities Act. Grand Staircase-Escalante encompasses the largest land area of all U.S. National Monuments.

## National Scenic Byway

[https://en.wikipedia.org/wiki/National\\_Scenic\\_Byway](https://en.wikipedia.org/wiki/National_Scenic_Byway)

> A National Scenic Byway is a road recognized by the United States Department of Transportation for one of the six "intrinsic qualities": archeological, cultural, historic, natural, recreational, and/or scenic. The program was established by Congress in 1991 to preserve and protect the nation's scenic but often less-traveled roads and promote tourism and economic development. The National Scenic Byways Program (NSBP) is administered by the Federal Highway Administration (FHWA).

## Hints for writing Unix tools

<http://monkey.org/~marius/unix-tools-hints.html>

> The workaday world of a modern programmer abounds with Unix tools, stitched together in myriad ways. While good tools integrate seamlessly with your own environment, bad ones will constantly frustrate your efforts. Good tools have a seemingly limitless application, constrained only by your own imagination. Bad tools, on the other hand, will often require that you deploy a salvo of brittle hacks to keep them barely working in your own environment. > I don't want to attempt to explain what makes for good design; this has been discussed elsewhere. Instead, I want to outline a few established customs that you should take care to follow when writing new tools. While making a truly good tool can be an elusive goal, it isn't difficult to avoid making a truly bad one. Unix demands good citizenry from its tools: it relies on a set of conventions to make things work, and importantly, to compose, well. Here follows a few key customs, often violated. These aren't absolute requirements, but you should think long and hard before violating them.

<http://www.michaeldanielmetal.com/welding-classes-new-york-city/>

Introduction to Welding and Metal Sculpting Classes  
Students will be introduced to basic welding and metal sculpting techniques and will complete a simple project by the end of the course. While most beginning welding and metal sculpting classes only offer basic instruction in oxy-acetylene gas welding, this course also offers instruction in the following types of welding: MIG Welding ARC Welding Oxy-Acetylene Gas Welding In addition to learning how to weld, students will also learn how to safely operate power tools used in metal sculpting and fabrication (including cutting, grinding, sanding, etc.)  
Classes are limited to 7 students. All necessary materials are covered in the cost of the tuition. No prior welding or sculpting experience necessary. Each section is five-weeks, with class held once a week for 3 hours.

## Pachamama

<http://en.wikipedia.org/wiki/Pachamama>

> Pachamama is a goddess revered by the indigenous people of the Andes. She is also known as the earth/time mother. In Inca mythology, Pachamama is a fertility goddess who presides over planting and harvesting. She causes earthquakes and is typically in the form of a dragon. She is also an ever present and independent deity who has her own self-sufficient and creative power to sustain life on this earth. Pachamama is the wife of Pacha Kamaq and her children are Inti, the sun god, and Killa, the moon goddess. In Quechua cosmology, these are the four organizing principles of nature based on water, earth, sun, and moon. Llamas as well as burned, elaborate miniature garments are sacrificed to her. After the conquest by Spain, which forced conversion to Roman Catholicism, the figure of the Virgin Mary became united with that of the Pachamama for many of the indigenous people. In pre-Hispanic literature, Pachamama is seen as a cruel goddess eager to collect her sacrifices. As Peru began to form into a nation, however, Pachamama began to be—and to this day is—perceived as being benevolent and giving. She is also seen as nature itself. Thus, problems arise when people take too much from nature because they are taking too much from Pachamama.

## Eyrie

<http://cheshirearchitects.com/projects/eyrie/>

> Eyrie comprises two houses near Kaiwaka. Each is barely larger than four sheets of plywood. They are made from wood, are off-grid and autonomous, their outsides burnt black. This project is part polemic, part escape. Holiday homes have become this country's decadence. Our sub-prime estuarine site permitted a 1500m<sup>2</sup> palace. It forbade two 29m<sup>2</sup> cabins. At night we talked excitedly about Malevich's Suprematism; in the morning we got up and wrote legal submissions on visual density and the attrition of driveways. We wanted a different vision for New Zealand's coastal future. In these houses a history of prismatic abstraction is conflated with a poetic of small boats bobbing in a sea of grass. There are no doors. One climbs up boulders and in through a window instead. We hoped that in subverting the shorthand language of building these little constructions might feel like something other than – and more than – houses.

### The Second Coming - Yeats

<http://www.potw.org/archive/potw351.html>

> THE SECOND COMING > > Turning and turning in  
the widening gyre > The falcon cannot hear the  
falconer; > Things fall apart; the centre cannot hold; >  
Mere anarchy is loosed upon the world, > The blood-  
dimmed tide is loosed, and everywhere > The  
ceremony of innocence is drowned; > The best lack all  
conviction, while the worst > Are full of passionate  
intensity. > > Surely some revelation is at hand; >  
Surely the Second Coming is at hand. > The Second  
Coming! Hardly are those words out > When a vast  
image out of Spiritus Mundi > Troubles my sight: a  
waste of desert sand; > A shape with lion body and the  
head of a man, > A gaze blank and pitiless as the sun, >  
Is moving its slow thighs, while all about it > Wind  
shadows of the indignant desert birds. > > The  
darkness drops again but now I know > That twenty  
centuries of stony sleep > Were vexed to nightmare by  
a rocking cradle, > And what rough beast, its hour  
come round at last, > Slouches towards Bethlehem to  
be born?

## The Super-Urban Promise

<http://www.theawl.com/2014/10/the-super-urban-promise>

> The new view: To live in a city with disposable income is to be able to have everything delivered, expensive or inexpensive, disposable or edible or whatever, directly to your door. To live outside of the city is to leave that grid to settle for an older, lesser grid, in which cheaper products don't come to you but the other way around. You can still get more expensive things delivered, or cheaper things delivered for a fee, or just Amazon things, but probably not coffee or one bowl of soup or laundry. Stopping by the coffee shop, in this future optimum urban utopia, is either an economic necessity or an affectation, either downscale or premium, like thrift shopping vs. vintage shopping. Environmental identities get muddled and flipped; previously important differences between affluent urban, suburban and rural lifestyles fade into the background. Cities, no longer the difficult but rewarding lifestyle alternative, become the easy option.

## Four-stroke engine

[https://en.wikipedia.org/wiki/Four-stroke\\_engine](https://en.wikipedia.org/wiki/Four-stroke_engine)

> A four-stroke engine (also known as four-cycle) is an internal combustion engine in which the piston completes four separate strokes which constitute a single thermodynamic cycle. A stroke refers to the full travel of the piston along the cylinder, in either direction. The four separate strokes are termed:

- > Intake: this stroke of the piston begins at top dead center. The piston descends from the top of the cylinder to the bottom of the cylinder, increasing the volume of the cylinder. A mixture of fuel and air is forced by atmospheric (or greater by some form of air pump) pressure into the cylinder through the intake port.
- > Compression: with both intake and exhaust valves closed, the piston returns to the top of the cylinder compressing the air or fuel-air mixture into the cylinder head.
- > Power: this is the start of the second revolution of the cycle. While the piston is close to Top Dead Centre, the compressed air-fuel mixture in a gasoline engine is ignited, by a spark plug in gasoline engines, or which ignites due to the heat generated by compression in a diesel engine. The resulting pressure from the combustion of the compressed fuel-air mixture forces the piston back down toward bottom dead centre.
- > Exhaust: during the exhaust stroke, the piston once again returns to top dead centre while the exhaust valve is open. This action expels the spent fuel-air mixture through the exhaust valve(s).

### Mercedes-Benz W113

[https://en.wikipedia.org/wiki/Mercedes-Benz\\_W113](https://en.wikipedia.org/wiki/Mercedes-Benz_W113)

> The Mercedes-Benz W 113 is a two-seat roadster/coupé, introduced at the 1963 Geneva Motor Show, and produced from 1963 through 1971. It replaced both the legendary 300 SL (W 198) and the 190 SL (W 121 BII). Of the 48,912 W 113 SLs produced, 19,440 were sold in the US. >> The W 113 SL was developed under the auspices of Mercedes-Benz Technical Director Fritz Nallinger, Chief Engineer Rudolf Uhlenhaut and Head of Styling Friedrich Geiger. The lead designers were Paul Bracq and Béla Barényi, who created its distinctive, patented, slightly concave hardtop, which inspired the "Pagoda" nickname. >> All models were equipped with an inline-six cylinder engine with multi-port fuel injection. The bonnet, trunk lid, door skins and tonneau cover were made of aluminum to reduce weight. The comparatively short and wide chassis, combined with an excellent suspension, powerful brakes and radial tires gave the W 113 superb handling for its time. The styling of the front, with its characteristic upright Bosch "fishbowl" headlights and simple chrome grille, dominated by the large three-pointed star in the nose panel, paid homage to the then already legendary 300 SL roadster. >> W 113 SLs were typically configured as a "Coupe/Roadster" with a soft-top and an optional removable hardtop. A 2+2 was introduced with the 250 SL "California Coupe," which had a fold-down rear bench seat instead of the soft-top.

### **Shanzhai Biennial 3: 100 Hamilton Terrace**

<http://dismagazine.com/dystopia/68220/shanzhai-biennial-3-100-hamilton-terrace/>

> Shanzhai Biennial operates in the glitches and side-streets of globalism, where images of East and West transform constantly through mis/re-appropriation, in the mutations of cultural memory, in the hysteria of the international art event, and in the doldrums of global capitalism. The project embodies the tensions between consumers and producers, art and commerce, popular culture and its critical commentator, which obviously have gained the trio extraordinary popularity in both fashion and art circles, perceived as self-reflective meta-narrative. "Between art and fashion we're kind of taking advantage of what each one of them doesn't know about the other one, and then what both of them don't know about China," says Radboy, while emphasizing that although SB problematizes institutional critique in its performative gestures, they are in no way critically-distanced cultural commentators, elevated from the criticized phenomenon: "It's important to communicate that we're not a brand about Shanzhai – we are actual shanzhai; we're not commenting on something, we belong to the phenomenon." He continues: "The project is authentically commercial. We totally implicate ourselves in the real economies we work in. If there is a critique produced it is physically embedded in our products — the same way it is in shanzhai products; the objects contain a critique, but the producers are only interested in profit." Exploring the dynamics of marketing, SB challenges not only mainstream consumer culture, but the art market and its performed heroism as a cultural sector. Completely immersed in point-of-views without attempting to agree to any of them, SB is political through it's depoliticization; it's embodied politics as self-critical consumerism and meta art/fashion-entertainment

## **Keep data about public land available and open to everybody.**

<http://accessland.org/>

> The federal government is requesting feedback on a draft contract that will define how we access our public lands for the next decade. This contract is for Recreation.gov, the website that provides access to our nation's parks, forests, campsites, cabins, and tours. As drafted, this contract places all the revenue and bookings into the hands of one contractor and one website, creating a closed silo and a monopoly. > > We can create a better world by encouraging the government to require a more open system. We've successfully pushed to extend the comment period until November 30th and have the attention of the Whitehouse and Congress. We need your help in sending the message that this contract needs to require open data and an API, which will allow third parties to build on top of Recreation.gov, improving access to public lands.

### **Seeing Networks - A rough field guide to network infrastructures**

<http://seeingnetworks.in/>

> How do you see the internet? >> Maybe that's not a clear question. Okay. >> When you think about or use the internet, what do you see? >> For a lot of people, the answer is that they see screens—browsers, software, laptops, phones. Maybe they see some hardware in the form of a wifi router. The internet is a network, but individual users mostly just get a glimpse of it, usually by peering into black mirrors. The most popular stock photography of internet infrastructure—data centers full of servers and cables—tends to make the physical internet feel clinical, distant, opaque. >> When I think about the internet, I think about scale. Computers used to be the size of entire rooms. While the hardware has gotten a lot smaller, the room has actually gotten bigger—we're surrounded by sensors, cables, cameras, all the stuff of networks, and the number of networked objects around us is only going to increase. These pieces of the network are at times hard, but not impossible, to see—if you know what you're looking for and how to look. And once you start looking, it's hard to stop noticing all the pieces of networks that are around us all the time.

### Santa Ana winds

[https://en.wikipedia.org/wiki/Santa\\_Ana\\_winds](https://en.wikipedia.org/wiki/Santa_Ana_winds)

> The Santa Ana winds are strong, extremely dry down-slope winds that originate inland and affect coastal Southern California and northern Baja California. Santa Ana winds blow mostly in autumn and winter, but can arise at other times of the year also. They can range from hot to cold, depending on the prevailing temperatures in the source regions—the Great Basin and upper Mojave Desert. The winds are known especially for the hot dry weather (often the hottest of the year) that they bring in the fall, and are infamous for fanning regional wildfires. For these reasons, they are sometimes known as the "devil winds" across Southern California.

### **Trailer homesteading in the Mojave**

<http://boingboing.net/2014/11/20/trailer-homesteading-in-the-mo.html>

> There are two kinds of rain to wish for. One is a slow steady rain, gentle enough that the water has time to sink in and long enough to sink deep. The other is hard rain, the kind that will turn the sandy roads into washes, the washes into quick rivers. No matter the time of year, yellow creosote flowers will appear a week or two after the rain. Grass might spring up for a few weeks, and if it happens a few times over the winter we'll have a spectacular wildflower bloom in the spring.

## Blog

<http://www.ursulaklequin.com/Blog2014.html#New>

> The sentence itself, its use and popularity, bothers me even more. Indifference to what words actually say; willingness to accept a vapid truism as a useful, even revelatory concept; carelessness about where a supposed quotation comes from — that's all part of what I like least about the Internet. ... > A very wonderful statement of the necessity, and the difficulty, of maintaining a connection to one's own child-self is Wordsworth's Ode on Intimations of Immortality. The poem offers a profoundly felt, profoundly thoughtful, radical argument: Our birth is but a sleep and a forgetting. Instead of seeing birth as an awakening from blank nonbeing into the child's fullness of being, and maturity as a narrowing, impoverishing journey towards blank death, the Ode proposes that a soul enters life forgetting its eternal being, can remember it throughout life only in intimations and moments of revelation, and will recall and rejoin it fully only in death.

## The Group That Rules the Web

<http://www.newyorker.com/tech/elements/group-rules-web>

> how does the W3C's HTML5 standard look in its totality? It's long. Looooong. Loooooooooong. The section on images is fourteen thousand words, and it is just one tiny section in a figure-laden work running almost five hundred and thirty thousand words long—over five times as long as the HTML4 specification it recommended, in 1997, though still a little shorter than "Infinite Jest." > > And yet, this massive, exhaustive spec describes barely a fraction of what truly defines the Web. For example, it doesn't say how one might go about making a JPG or a GIF, or how those files are arranged in binary streams of data. It simply tells you how to point to the images in a Web page. For all the other stuff, there are other standards, written in other rooms, by other people. And those standards are based on even more standards, all the way down, going back decades. ... > A standard is a skewed mirror of culture, and HTML5 is no different. Here is what it tells us we care about: words, headlines, video, and audio. We like to organize things into lists, and we like to look at pictures. And we want everything to be capable of animation and interaction—every letter, every tag, every structural element. Every bit of HTML5 is open to interpretation by code, available to be twisted, rotated, and manipulated by its users. > > The Web, which used to be a place you went to get things, is now also a place to do things. That took a decade. It is 2014, and we have HTML5—the markup we deserve, and here to stay. Just like with the Buffalo Conference, of 1908, you will be able to hear the music a hundred years from now, as long as you have the right kind of player piano.

### Turning the World Into Art

<http://pitchfork.com/features/the-out-door/8692-field-recording/4/>

> It's not an aim of what I do, but inevitably, things end up being documented, even though it's not an elegy or epitaph. Sounds are very transitional in that sense. They come and they go. Some of the original recordings I make, if I think they are significant, I deposit them in the British Library National Sound Archive, just like a book. So anybody who is doing research or any educational project can access those recordings free of charge. The main purpose is that they are documented in a substantial archive. It's important, but it's not something I can often consider.

## The Cat Went Over Radioactive Mountain

<http://www.methodquarterly.com/2014/11/the-cat-went-over-radioactive-mountain/>

> And then there are tumbleweeds, whose taproots can reach 20 feet down to suck up buried radioactive waste. In the winter, those taproots wither, and it's off the tumbleweeds go, tumbling miles away with the wind. In 2010, Hanford had to chase down 30 radioactive weeds.

### **Yucca Mountain**

[https://en.wikipedia.org/wiki/Yucca\\_Mountain](https://en.wikipedia.org/wiki/Yucca_Mountain)

> Yucca Mountain is a mountain in Nevada, near its border with California, approximately 100 miles (160 km) northwest of Las Vegas. Located in the Great Basin, Yucca Mountain is east of the Amargosa Desert, south of the Nevada Test and Training Range and in the Nevada National Security Site. It is the site of the Yucca Mountain nuclear waste repository, which is currently identified by Congressional law as the nation's spent nuclear waste storage facility. However, while licensure of the site through the Nuclear Regulatory Commission is ongoing, political maneuvering led to the site being de-funded in 2010.

## On File Formats, Very Briefly

<https://themanual.org/read/issues/4/paul-ford/article>

> And it strikes me that this is a fundamental drama of new technologies. Unix beat out the LISP machines. If you consider mobile handsets, many of which run descendants of Unix (iOS and Android), Unix beat out Windows as well. And HTML5 beat out all of the various initiatives to create a single unified web. It nods to accessibility; it doesn't get in the way of those who want to make something huge and interconnected. But it doesn't enforce; it doesn't seek to change the behavior of page creators in the same way that such lost standards as XHTML 2.0 (which emerged from the offices of the World Wide Web Consortium, and then disappeared under the weight of its own intentions) once did. > It's not a bad place to end up. It means that there is no single framework, no set of easy rules to learn, no overarching principles that, once learned, can make the web appear like a golden statue atop a mountain. There are just components: HTML to get the words on the page, forms to get people to write in, videos and images to put up pictures, moving or otherwise, and JavaScript to make everything dance.

## Weather Man

<http://www.newyorker.com/project/portfolio/weather-man>

> Vyacheslav Korotki is a man of extreme solitude. He is a trained polyarnik, a specialist in the polar north, a meteorologist. In the past thirty years, he has lived on Russian ships and, more recently, in Khodovarikha, an Arctic outpost, where he was sent by the state to measure the temperatures, the snowfall, the winds. The outpost lies on a fingernail of a peninsula that juts into the Barents Sea. The closest town, by any definition, is an hour away by helicopter. He has a wife, but she lives far away, in Arkhangelsk. They have no children. On his rare visits to Arkhangelsk, he has trouble negotiating the traffic and the noise. Arkhangelsk is not Hong Kong. Korotki is sixty-three, and when he began his career he was an enthusiast, a romantic about the open spaces and the conditions of the Arctic. He watches the news on TV but doesn't fully believe it. Polyarniki were like cosmonauts, explorers for the Soviet state. There are fewer now. Who wants to live like this anymore? Evgenia Arbugaeva, a photographer who grew up in the Arctic town of Tiksi, spent two extended stays with Korotki. "The world of cities is foreign to him—he doesn't accept it," she says. "I came with the idea of a lonely hermit who ran away from the world because of some heavy drama, but it wasn't true. He doesn't get lonely at all. He kind of disappears into tundra, into the snowstorms. He doesn't have a sense of self the way most people do. It's as if he were the wind, or the weather itself."

## Sutyagin House

[https://en.wikipedia.org/wiki/Sutyagin\\_House](https://en.wikipedia.org/wiki/Sutyagin_House)

> The Sutyagin House was a wooden house in Arkhangelsk, Russia. > > The 13-story, 144-foot-tall (44 m) residence of the local entrepreneur Nikolai Petrovich Sutyagin was reported to be the world's, or at least Russia's, tallest wooden house. Constructed by Mr. Sutyagin and his family over 15 years (starting in 1992), without formal plans or a building permit, the structure deteriorated while Mr. Sutyagin spent a number of years in prison for racketeering. > > In 2008, it was condemned by the city as a fire hazard, and the courts ordered it to be fully demolished by February 1, 2009. On December 26, 2008, the tower was pulled down, and the remainder was dismantled manually[6] over the course of the next several months. The remaining four-storey structure burned to the ground on May 6, 2012.

### Atacama Desert

[https://en.wikipedia.org/wiki/Atacama\\_Desert](https://en.wikipedia.org/wiki/Atacama_Desert)

> The Atacama Desert (Spanish: Desierto de Atacama) is a plateau in South America, covering a 1,000-kilometre (600 mi) strip of land on the Pacific coast, west of the Andes mountains. It is the driest non-polar desert in the world. According to estimates the Atacama Desert proper occupies 105,000 square kilometres (41,000 sq mi), or 128,000 square kilometres (49,000 sq mi) if the barren lower slopes of the Andes are included. Most of the desert is composed of stony terrain, salt lakes (salares), sand, and felsic lava that flows towards the Andes.

### Graphene

<https://en.wikipedia.org/wiki/Graphene>

> Graphene (/ˈgraef.i:n/) is pure carbon in the form of a very thin, nearly transparent sheet, one atom thick. It is remarkably strong for its very low weight (100 times stronger than steel) and it conducts heat and electricity with great efficiency. While scientists had theorized about graphene for decades, it was first produced in the lab in 2003. Because it is virtually two-dimensional, it interacts oddly with light and with other materials. Researchers have identified the bipolar transistor effect, ballistic transport of charges and large quantum oscillations.

## WWWXT: The Oldest Internet Archive

<http://www.fastcompany.com/3040130/superlatives-week/the-biggest-archive-on-the-internet-that-youve-never-heard-of>

> Pronounced "web text," wwwtxt was originally intended to include only content from 1988 to 1994, but now reaches all the way back to 1980. It works, in part, because of nostalgia; some of Rehn's readers have memories of participating in these communities or using technology from the time. But for those born too late, when wwwtxt's heyday era was already well underway, there's also a fascination with not knowing what came before. Sometimes it's a conversation about virtual reality or digital currency or Internet sex, all tinged with the unbridled enthusiasm of a nascent, booming, Internet age. But the reaction is often the same: People do a double take when they realize someone said that in, say, 1987.

### The California Sunday Magazine

<https://stories.californiasunday.com/2015-01-04/mexico-the-disappeared-en>

> Murillo Karam's words confirmed many observers' worst fears: The government was doing everything it could to close the case. The Argentine forensic team that had been working alongside the government quickly distanced itself from Murillo Karam's account. "At the moment," it said in a December 7 press release, "there is not enough scientific certainty or physical evidence to claim that the remains recovered from the San Juan River by authorities ... correspond to those removed from the Cocula trash dump in the manner indicated by the accused." > Which meant that 11 weeks after the attacks, the parents possessed little more information about their sons than what they had been told in the days immediately after the disappearances. This is what they knew. This is what we know. The police, aided by gunmen, killed three people, wounded more than 20, and disappeared 43. Three masked gunmen in civilian clothes returned to the scene of one of the attacks and killed two students and wounded others. Someone murdered and mutilated Julio César Mondragón Fontes. Someone murdered and burned Alexander Mora Venancio. The army forcibly removed wounded students from a private hospital but otherwise did not intercede. Everything else about what happened to the students after the police took them is either rumor, speculation, or based on dubious confessions.
